ADAMS COUNTY NURSERY AND FRUIT FARMS

Aspers, Pennsylvania

Dear Friends and Fellow Fruit Growers:

Another year has passed and the time is here to begin planning for the next. One of your first, and most important, programs for next spring will be resetting trees in your present orchards and establishing new orchards. Resetting must be done to maintain peak production per acre in your present orchards, new orchards must be planted to keep your orchards up to date with future market requirements.

Listed in this catalog you will find a complete line of varieties. Some are suitable for local markets while others are excellent varieties for the city markets. We are certain you can find listed in this catalog varieties which best meet your needs.

The past growing season has been one of the driest on record and our trees show the effects of it. Our trees this year are excellent trees. They have gone through the dry weather without irrigation which induced development of fine fibrous root systems. Although, due to the dry weather, these trees are not as large as we normally grow they have hardened off into sturdy, well rooted stock.

Again this year, due to great demand, we have expanded our production of Dwarf and Semi-Dwarf apple trees for this years planting. We have a fine selection of varieties available on E.M. II, E.M. VII and E.M. IX roots. Although our supply is good we suggest you order early to be sure of getting the trees you need.

Check through this catalog and select the varieties that will best meet your needs and send us your order. No matter how large or small your order may be, we will make every effort to give you prompt, courteous service.

Sincerely yours,

A handwritten signature in cursive script, reading "George L. Baugher".

You Can't Beat Our Prices, Quality, Service

Fresh Dug Trees - No Winter Storage

Our fruit trees are grown on the best grade whole root seedlings in the leading fruit growing county of Pennsylvania. The soil is especially prepared before planting seedlings, thus providing the richest fruit soil available. We supervise the cutting of buds and the best of care is taken to have every variety true to name. Our Nursery is inspected every year by State Nursery Inspectors, to see that all nursery stock is disease free. A Certificate of Inspection accompanies all purchases.

The price list contains a list of the best varieties for the Eastern Fruit Belt, and their descriptions are not exaggerated or misleading.

Come to the Nursery - if you can do so - make your selection and take the trees with you in your automobile or truck. Shipping service via Express, Freight or Parcel Post is also available.

Our shipping facilities are ideal, including a large packing-house on a siding of the Reading Railroad. The trees are carefully packed and should reach you in excellent condition.

Order early and be sure to get the varieties and quantity you need.

CARE OF FRUIT TREES

Newly planted trees should be well cultivated or mulched the first season to conserve moisture and to keep down weeds and grass. It is not always good economy to intercrop with grass, small fruits, or grain, unless the young trees are making exceptionally strong growth. While making their initial growth the trees should not have to compete with other crops for the plant-food in the ground. However, when the trees are well established the spaces between the rows may be used for other crops.

One of the most important items in the care of fruit trees is to see that they are properly trained from the start. Our two-year-old trees have the heads already formed, with three to five scaffold limbs well arranged along the trunk to support the head.

One-year-old trees (or whips) should be trimmed to smooth, straight stems. Cut them squarely off at the distance from the ground at which it is desired to have them branch. Peaches should be encouraged to branch as low as possible. The after-pruning is a matter which requires some knowledge of tree growth and habit, as well as the purpose for which the trees are grown.

Contact your County Agent for spraying instructions.

OUR GUARANTEE

We guarantee every tree to be as represented in grade and quality and if on arrival you do not find them as we say they are, return them to us securely packed and in good condition within five days and your money will be refunded in full.

We guarantee our nursery stock to be true to name. Any proving not so will be replaced or purchase price refunded. In no case shall our maximum responsibility exceed the original amount paid.

Since the growth of fruit trees is determined by the care they receive by the planter, we give no guarante as to growth.

PACKING OF NURSERY STOCK

Packing is done in boxes or bales to protect the roots and trees in shipment. No charge is made for packing or delivery to Bendersville Railroad Station.

SHIPPING OF NURSERY STOCK

The spring shipments of nursery stock begin about March 15 to April 1, depending upon the season. Fall shipments begin about November 15th. We request that you state whether you wish stock shipped by freight or express. Occasionally shipments can be made by Motor Freight if desired. Parcel Post shipments are restricted in size to 100 inches combined length and girth.

PLANTING OF FRUIT TREES

Since fruit trees cannot thrive in a damp, soggy soil it is wise to choose land that is well-drained. Pear, plum and quince will stand a greater amount of dampness than other fruits, but it is better if they do not have to contend with unfavorable drainage. The best-drained soil is that where natural elevation induces rapid elimination of surplus water. A gently sloping hillside, free from hollows or swales, where late frosts may not linger, affords the best site. Peaches should get the highest locations, because there is less danger from late spring frosts on high ground.

If possible, the land should be prepared as for a good crop of grain, although heavy fertilization is not essential if soil is reasonably fertile.

Stake out the orchard in advance to be sure that the holes are properly placed. Have the holes dug large enough to receive the roots comfortably without bending or twisting them.

If at all possible, the trees should be planted immediately after arrival from nursery. The roots should be kept covered to prevent their drying out. In planting, set the trees upright near the center of the holes. Spread the roots evenly, and work fine earth in among them, making sure that they are packed in close contact with the soil. If small airpockets remain about the roots they will extract moisture from them, so injuring them that the trees may die. **DO NOT APPLY COMMERCIAL FERTILIZER OR MANURE TO THE ROOTS WHEN PLANTING.** Any material of this type used should be applied on the top soil after the trees are planted.

In setting out young trees, place them a little deeper than they grew in the nursery. The earthmark on the base of the stem is the best guide in this.

If it is impossible to plant the trees immediately, dig them in. To do this dig a trench—shovel width and depth—long enough to hold the roots when they are placed side by side in an upright position. Cover the roots with fine earth, and when the trench is half full, soak them with water. Then pile on the remainder of the earth. In this temporary planting the trees will keep in good condition for one or two weeks.

DISTANCES APART FOR PLANTING

WRITE FOR QUOTATIONS ON QUANTITY ORDERS

We invite you to compare ours with any grown.

LODI

A Transparent type of apple of much larger size and more firm. It ripens a few days later than Yellow Transparent, but is large and can be picked with Transparent. It should be interplanted for cross pollination.

RED MELBA

AVAILABLE ON EM II ROOTS ONLY

Early, red, McIntosh type apple. Ripens mid-August. Fruit highly colored with good quality. Ideal road side market apple.

EARLY McINTOSH

AVAILABLE ON EM II ROOTS ONLY

The fruit resembles McIntosh in appearance but is less aromatic and more sprightly. Tree is vigorous and productive. Heavy thinning is required to obtain good size. Fruit ripens about with Duchess.

PURITAN

AVAILABLE ON EM II ROOTS ONLY

A new McIntosh type from the University of Massachusetts which reaches picking maturity about with Early McIntosh. Fruit is solid red blush in color and averages larger than Early McIntosh. For dessert purposes rates fair to good quality.

BEACON

AVAILABLE ON EM VII ROOTS ONLY

An early variety maturing about a week after Early McIntosh. Fruit is medium sized, dark red and of fair to good quality. Unlike most early varieties, Beacon handles well and may be stored for six to eight weeks. Like most early varieties, Beacon ripens over several weeks and requires about three pickings.

SUMMER RAMBO

Very large; greenish red, striped, tender, juicy; tree strong grower. Ripens August 15 to September 15.

RED SUMMER RAMBO

A new earlier coloring strain of Summer Rambo. Fruit is identical to its parent in size and quality and colors to a bright solid red when mature.

DOUBLE RED McINTOSH

Bright, deep red; fine quality. Ripens in September and keeps late into the winter in common storage.

CORTLAND

A cross between McIntosh and Ben Davis, inheriting the good qualities of both parents. It is a beautiful red, larger than McIntosh and matures a month later; hangs well to the tree. It keeps late in winter.

SPARTAN

AVAILABLE ON EM II ROOTS ONLY

A very attractive McIntosh type apple maturing about one week after McIntosh. It has firmer flesh than McIntosh and has excellent dessert quality. It keeps in storage several weeks longer than McIntosh.

SMOKEHOUSE

One of the old kinds welcomed in every home. Ripens in September and can be kept in common storage late into the winter.

DOUBLE RED JONATHAN

A red sport of regular Jonathan, similar in every respect except that it colors earlier and produces fruit of higher color.

GRIMES GOLDEN

A good-sized yellow apple of high quality. Ripens in September; can be kept late into the winter.

IDARED

Idared is a dual purpose apple, suitable for both fresh and processed markets. It is a solid red apple of good quality. It begins to bear young, and will keep well in storage. Picking season is about the same as for Northern Spy. It is a Jonathan and Wagner cross.

N. W. GREENING

Fruit is large to very large, becoming yellowish-green when ripe. Tree is a vigorous grower and quite hardy.

YELLOW DELICIOUS

A good variety, resembling the Red Delicious somewhat in shape. Ripens about same time as Grimes Golden.

TRIPLE RED DELICIOUS

Earlier, solid red color. An improvement over Richared which it resembles in size and shape.

✓ **DOUBLE RED DELICIOUS**

A much higher colored fruit than the regular Delicious, coloring earlier, similar in every other respect to the regular Delicious.

✓ **TURLEY**

A beautiful apple resembling Stayman Winesap and of Stayman type. The fruit does not crack. It looks like a good commercial variety.

✓ **RED YORKING**

This is a sport of the regular York Imperial. It colors earlier and produces higher color than the regular York Imperial.

✓ **YORK IMPERIAL**

A medium to large winter apple with yellow skin shaded red; firm, juicy, subacid. An excellent canning and shipping apple and good for export. Ripens in October.

✓ **DOUBLE RED WINESAP**

An improved, all-red Winesap. Fruit is darker, earlier color and good size. Recommended for growers who want a more solid red-colored Winesap.

✓ **DOUBLE RED STAYMAN (201)**

Similar to the Stayman Winesap, excepting that it colors earlier and produces fruit of higher color.

✓ **RUBY**

Produces large, fairly attractive fruit of good quality for both dessert and processing. It is a particularly good keeper. May have value as a late general purpose variety.

✓ **GALLIA BEAUTY**

A very high colored sport of the old Rome Beauty, having all the qualities of this apple plus the advantage of greater color.

✓ **RED ROME BEAUTY (262)**

A new sport of Rome Beauty. Tree is identical to its parent in growth habit. Fruit is highly colored and of the same quality as Rome Beauty. This strain of Red Rome is more suitable to some localities than Gallia.

PEARS

Prices listed are per tree.

	1-9	10-49	50 or more
4 to 6 ft., one year trees	\$1.70	\$1.40	\$.90
3 to 4 ft., one year trees	1.50	1.20	.80
2 to 3 ft., one year trees	1.25	1.00	.70

Write for quotations on quantity orders.

DWARF PEAR

Pear trees are dwarfed by propagating them on Angers Quince roots. The type Quince root which we are using produces a full dwarf tree. These trees will produce heavy crops of fruit and will come into bearing early.

The Bartlett variety is incompatible when budded directly on Quince. For this reason this variety must be double worked on Old Home or Maxime. We have a limited quantity of Bartlett double worked on Quince for this spring delivery.

BARTLETT

(DWARF TREES AVAILABLE IN THIS VARIETY, ADD \$.85 PER TREE)

Large; buttery, juicy, highly flavored; great bearer. This has long been considered one of the choicest canning varieties. A favorite for all uses. Ripens in August.

CLAPP'S FAVORITE

Very large; yellow and dull red skin, with russet specks; flesh melting, rich. Resembles Bartlett very much. Ripens in August.

SECKEL

Small; skin rich yellowish brown when fully ripe, with deep brownish red cheek; flesh very fine-grained, sweet, juicy, melting, buttery. One of the richest and highest flavored pears. Equally popular for dessert and pickling. Ripens in September.

BEURRE D'ANJOU

Large; buttery, melting, rich vinous. The best late fall and early winter pear. Can be kept in cold storage until late spring.

BEURRE BOSC

A large yellow pear, flesh white, rich and delicious. Tree slow grower but very productive.

OLD HOME

A very blight resistant variety used as an interstem for Bartlett on Quince root. This variety is often used for a base tree for Bartlett where fire blight is a severe problem.

MAXIME

(DWARF TREES AVAILABLE IN THIS VARIETY. ADD \$.85 PER TREE.)

Fruit is large, attractive yellow, with a flesh which is slightly coarse. Flavor is sweet, mild and juicy. Tree is productive and very resistant to fire blight. Ripens September through October.

**Finished Tree - EM VII, One Year
Two Months to Grow**

FROM SEEDLING TO FINISHED TREE FOR SPRING PLANTING

EAST MALLING II ROOTSTOCKS

The East Malling II rootstock produces a medium-vigorous tree with a good root system. Trees on these stocks can be grown without any special support and will reach a size one-third to one-half that of a standard tree. Trees behave well on most soils and are highly satisfactory for commercial orchards. Suggested planting distance for orchards of E.M. II rootstocks is 20 x 30 ft.

EAST MALLING VII ROOTSTOCKS

East Malling VII rootstock produces an open, spreading, semi-dwarf tree about the size of an average peach tree. Tree is sturdy, winter hardy, uniform growing, and will carry its crop well through very dry seasons. Suggested planting distance about 18' by 24'.

EAST MALLING IX ROOTSTOCKS

The East Malling IX rootstock produces the most dwarfing of all apple stocks being propagated today. Trees on this root grow to a height of about eight to twelve feet tall and bear fruit in two to three years. Due to a very weak root-system trees will need to be staked or tied to keep them upright. This type of root is ideal for small home orchards.

PLANTING INSTRUCTIONS

We recommend, when planting Semi-Dwarf apple grown on E.M. rootstocks, that the trees be set with the point of union between the dwarf root and the budded variety three inches above ground level, thus eliminating the chance of the variety rooting and making a standard tree. Do not leave more than four inches of the rootstock above ground level or it will weaken the trees stability. Our trees are intentionally budded high to allow you to plant them deep yet leave three to four inches of the Malling stock above ground.

LEADING VARIETIES OF PEACH TREES

Good thrifty one year old trees.

COLLINS

A firm, attractive, high quality, yellow-fleshed peach of medium size ripening a few days before Sunrise. Freestone when fully matured but semi-cling when firm ripe. Tree is vigorous and productive. Will require heavy early thinning to insure good size.

ERLIRED

A round, medium sized early peach with very attractive color. Fruit is about 85% bright red blush over yellow ground color. Flesh is yellow, firm but melting, medium in texture, and of good flavor. A cling when firm ripe and semi-free in the soft ripe stage. Tree is vigorous and productive and will require heavy early thinning for best size.

SUNRISE (N.J. 133)

RIPENS ABOUT JULY 16, OR 46 DAYS BEFORE ELBERTA.

Sunrise is a firm, attractive, yellow-fleshed peach of medium size, ripening ten days to two weeks before Jerseyland. It is resistant to bacterial spot. The fruit is brighter and more attractive than Early East and Jerseyland. It is classified as a semi-clingstone, but is almost a freestone when ripe.

DIXIRED

RIPENS ABOUT JULY 20, OR 42 DAYS BEFORE ELBERTA.

A clingstone, medium size, with very bright, attractive color. Flesh is yellow, firm, with good flavor. Its outstanding characteristics are its unusual firmness and slow rate of softening for an early peach, and its attractive appearance. A good early shipping peach.

ERLY-RED-FRE

A large, white fleshed, semi-freestone peach of good quality. Fruit is attractive with bright red blush on creamy white background. Tree is thrifty, hardy in fruit buds and a heavy bearer. One of the better early commercial varieties.

SUNHAVEN

RIPENS ABOUT JULY 21, OR 41 DAYS BEFORE ELBERTA.

A new variety introduced by the Michigan Experiment Station. Fruit resembles Red Haven in color but ripens about ten days earlier. Fruit is medium-large in size, nearly round, and uniform in shape. Skin color is much like Red Haven, largely bright red with golden ground color. Tree is hardy, vigorous and productive.

CORONET

RIPENS ABOUT JULY 28. OR 34 DAYS BEFORE ELBERTA.

Early yellow freestone, ripening just before Red Haven. Fruit is medium size, highly colored, with bright, attractive red blush over good yellow ground color. Excellent quality. Trees are vigorous and productive. Blossoms are self-fertile.

RED HAVEN

RIPENS ABOUT JULY 31, OR 31 DAYS BEFORE ELBERTA.

A cross between Hale Haven and Kalhaven. Tree is vigorous and very bud hardy, also bears young. Fruit is medium sized and colors to a brilliant red.

RARITAN ROSE (N.J. 97)

RIPENS ABOUT AUGUST 3, OR 28 DAYS BEFORE ELBERTA.

A firm, attractive, white-fleshed freestone of good quality. The tree is vigorous, hardy and productive. The best early white for the roadside trade.

GOLDEN JUBILEE

RIPENS ABOUT AUGUST 5, OR 26 DAYS BEFORE ELBERTA.

Developed and introduced by the New Jersey Experiment Station. A yellow, early, freestone peach, ripening about three weeks before Elberta, and of good quality.

KEYSTONE

A new U.S.D.A. introduction. A cross of Newday and Southland ripening between Golden Jubilee and Triogem. Fruit is medium large size, round, high red color with golden background. Yellow flesh, firm, good flavor, freestone. Tree is vigorous and productive.

RANGER

RIPENS ABOUT AUGUST 7, OR 24 DAYS BEFORE ELBERTA.

A new U.S.D.A. introduction. A yellow freestone ripening with or just after Golden Jubilee. Fruit is medium to large size, almost round, highly colored with bright red blush covering most of the peach. Flesh yellow, medium firm, good flavor and suitable for canning or freezing. Tree is vigorous and productive, showing marked resistance to bacterial leaf spot. It is self fertile.

TRIOGEM (N.J. 70)

RIPENS ABOUT AUGUST 9, OR 22 DAYS BEFORE ELBERTA.

A red all over, yellow freestone, ripening about 5 to 7 days later than Golden Jubilee. It is superior to the Golden Jubilee because it is firmer, ripens slowly, ships well, colors much better. Peaches on the inside of the tree are well colored, and have high quality. Considered to be one of the best New Jersey introductions.

WASHINGTON

This variety ripens about 3 days after Triogem and 3 days before Sunhigh. The fruit is large, firm, well colored, and good quality. Tree is vigorous and productive. Buds are extremely resistant to spring frost. This variety shows great promise as a leading commercial variety.

RED GLOBE

RIPENS ABOUT AUGUST 16, OR 15 DAYS BEFORE ELBERTA

A round, yellow fleshed peach of high quality. Fruit is very firm, fine textured with bright red blush over yellow ground color. Acceptable for both canning and freezing. Tree is vigorous and productive. Blossoms are large and self-fertile. This variety is most valuable where high color and firm flesh are especially desired.

THE ADAMS COUNTY NURSERY AND FRUIT FARMS

SOUTHLAND

RIPENS ABOUT AUGUST 16, OR 15 DAYS BEFORE ELBERTA

Midseason, yellow, freestone, medium to large round, attractive. Tree is vigorous and productive. U.S.D.A. introduction.

SUNHIGH (N.J. 82)

RIPENS ABOUT AUGUST 15, OR 16 DAYS BEFORE ELBERTA.

A large, smooth, yellow, freestone peach of highest quality introduced by New Jersey Experiment Station in 1938. The flesh is firm, color bright red over an orange ground color. It is the most attractive of any of the newer peaches. Ripens right after Triogem and with Hale Haven.

SUMMERQUEEN (N.J. 157)

A large, attractive, firm, yellow fleshed peach ripening about with Sunhigh. Fruit is less susceptible to Bacterial Spot than Sunhigh and may be used to replace this variety where Bacterial Spot is a problem. Bloom is not self fertile and needs cross-pollination.

RICHHAVEN

RIPENS ABOUT AUGUST 17, OR 14 DAYS BEFORE ELBERTA.

A new variety introduced by the Michigan Experiment Station. Fruit is large, nearly round and uniform in size and shape. Large bright red blush on area exposed to sun with stripes of red and gold for the background color. Yellow, freestone, and a good shipping peach. Tree is hardy, vigorous and productive.

HALE-HAVEN

RIPENS ABOUT AUGUST 17, OR 14 DAYS BEFORE ELBERTA.

Yellow, freestone, large, high red color, firm and good flavor. It takes on red color early and the peaches show good red color several days before ripening, which gives it a distinctive advantage for marketing. Very hardy in fruit bud and a heavy bearer.

AMBERGEM

A non-melting cling for canning purposes. One of the best canning varieties. Tree hardy and good cropper.

LORING

RIPENS ABOUT AUGUST 21, OR 10 DAYS BEFORE ELBERTA.

A new variety introduced by the Missouri Experiment Station. A large, firm, yellow-fleshed freestone with attractive bright color of red and yellow over a yellow ground color. Resembles Golden Jubilee in color and shape but is much firmer.

SUNCREST

RIPENS ABOUT AUGUST 21, OR 10 DAYS BEFORE ELBERTA

Fruit is large, round and freestone. At maturity about two thirds of the surface is covered with bright attractive red blush over yellow ground color. Flesh is yellow, firm but melting, and of good flavor. Tree is vigorous and productive. Susceptible to bacterial spot.

BELLE OF GEORGIA

RIPENS ABOUT AUGUST 24, OR 7 DAYS BEFORE ELBERTA.

Very large peach with red cheek; flesh white and firm, of excellent flavor; fine shipper.

ASPERS, ADAMS COUNTY, PENNSYLVANIA

M. A. BLAKE (N.J. 117)

RIPENS ABOUT AUGUST 24. OR 7 DAYS BEFORE ELBERTA.

A large, firm, bright, attractive, yellow-fleshed freestone, ripening about a week before Elberta. The fruit hangs well to the tree and remains firm for several days after the ground color has turned bright yellow. Quality is equal to J. H. Hale. Tree is of medium size, vigorous and productive. Fruit buds would compare to Elberta in hardiness. It is resistant to bacterial spot and is an excellent freezing and canning variety.

REDSKIN

RIPENS ABOUT AUGUST 29. OR 2 DAYS BEFORE ELBERTA.

A new University of Maryland introduction. A cross between J. H. Hale and Elberta. Tree is vigorous and productive. Fruit is large, yellow, freestone, with deep red blush. Ripens with or slightly before Elberta.

ALL RED ELBERTA

A very highly colored strain of Elberta. Fruit is identical to Elberta in size, productiveness and season. Where a highly colored Elberta is desired this variety would be excellent.

ELBERTA

RIPENS ABOUT AUGUST 31.

One of the greatest commercial yellow peaches known. Good shipper. Tree hardy and good grower.

J. H. HALE

RIPENS ABOUT SEPTEMBER 2. OR 2 DAYS AFTER ELBERTA.

Yellow; very large in size and globular in shape; skin thick, smooth and without fuzz; flesh deep yellow, fine-grained, firm, of extra quality; good shipper. It ripens a little after Elberta, and brings highest prices.

SHIPPER'S LATE RED

RIPENS ABOUT SEPTEMBER 3. OR 3 DAYS AFTER ELBERTA.

A large, highly colored peach. Very hardy, yellow-fleshed and freestone of good quality. Ripens just after Hale and Elberta.

WHITE HALE (N.J. 63)

RIPENS ABOUT SEPTEMBER 4. OR 4 DAYS AFTER ELBERTA.

A large, freestone peach. Very similar to J. H. Hale, only white in flesh.

AFTERGLO (N.J. 84)

RIPENS ABOUT SEPTEMBER 5. OR 5 DAYS AFTER ELBERTA.

A large, highly colored yellow, freestone peach ripening five days after Elberta. Red coloring carries through the flesh, it being especially red about the pit. A variety that appears hardy and worthy of trial.

RIO-OSO-GEM

RIPENS ABOUT SEPTEMBER 5. OR 5 DAYS AFTER ELBERTA.

Originated in California. Introduced under plant patent No. 84. Patent now expired. A Hale type peach ripening about 5 days after Elberta. Fruit is large in size with bright red color. Flesh is firm with excellent flavor.

NECTARINES

✓ **CAVALIER NECTARINES**

A good sized, highly colored, yellow fleshed nectarine. Fruit has fine yellow flesh of good quality and shows marked resistance to brown rot. Tree is vigorous and productive.

↘ **LEXINGTON NECTARINE**

A productive, medium sized, attractive nectarine, ripening about 2½ weeks before Elberta. Fruit is yellow fleshed and slightly soft. Flavor is sweet and slightly strong. Tree is very hardy and resistant to spring frost.

3 to 4 ft. _____	1.65	1.40	1.00

BLACK TARTARIAN

Sweet. Very large, dark red cherry, becoming black when over-ripe; juicy. Ripens in June.

YELLOW SPANISH

Sweet. Large; pale yellow, with red cheek; flesh firm, juicy, and excellent. One of the best light-colored cherries. Vigorous and productive. Ripens middle of June.

SCHMIDT'S BIGARREAU

Sweet. Fruit very large, of deep mahogany color; flesh is tender; very juicy with a fine, rich flavor. Fruit grows in clusters. Ripens in middle to last of June.

HEDELFINGEN

Ripens just ahead of Windsor & Lambert. Large, firm-fleshed, high quality, late black cherry of Lambert type. The fruit is more resistant to cracking than most cherries.

VAN

Tree is large, outstandingly hardy and a heavy bearer. Ripens just before Windsor. Fruit is large, black with bright luster, very firm, with short stem. Less susceptible to cracking than Lambert. Quality is good.

WINDSOR

Large, sweet, almost black, fine quality. Valuable late variety.

NAPOLEON

Sweet. Large; pale yellow or red; firm, juicy, sweet and productive. Ripens in July.

LAMBERT

Sweet. A fine variety, and one of the largest dark sweet cherries. Flesh firm; rich, juicy. Tree a strong grower and enormous bearer. Ripens in July.

BING

This is one of the largest eastern sweet cherries. Fruit dark red almost black when ripe. A fine market variety. Ripens mid July.

YELLOW GLASS

A golden, yellow cherry in warm season, red cheek in cool season. Ripens about July 4th.

PLUMS

	1-9	10-49	50 or more
5 to 6 ft. -----	\$1.95	\$1.60	\$1.10
4 to 5 ft. -----	1.70	1.40	.90
3 to 4 ft. -----	1.50	1.20	.80

METHLEY

A new plum that is rapidly gaining favor due to its fine quality and appearance. Fruit reddish purple with red flesh, very juicy with a distinctive flavor. Fruit medium to large size.

BURBANK

Cherry-red. Most profitable among growers for market. Ripens 10 to 14 days later than Abundance.

BRADSHAW

A very large, fine dark red, good shipping plum. The flesh is yellowish-green and juicy. Tree is very vigorous, erect and productive.

SHIRO

A large, sweet, yellow plum; fine shipper and market sort. Ripens in August.

REINE CLAUDE

A medium sized, green fleshed plum of good quality. Fruit is very sweet and similar to Green Gage.

SANTA ROSA

A large attractive red fleshed plum of good quality. Fruits keep and ship well. Tree is vigorous and a prolific bearer.

OZARK PREMIER

A Burbank X Methley cross. Fruit extremely large, firm, red with yellow flesh. Flavor good, juicy, tart. Clingstone, small seed. Ripens August 1st.

FORMOSA

Midseason, prolific. Fruit is greenish yellow overlaid with red.

WICKSON

Extra large, dark red plum of excellent quality. Fruit is yellow fleshed, firm and sweet. This variety tends to be a shy bearer and should have a pollinator.

DUARTE

A large eggshaped plum of good quality. Fruit is red with red flesh to the seed. Tree is spreading and vigorous.

IMPERIAL EPINEUSE

An old French prune. Fruit is reddish purple, tender, sweet, juicy, and highly flavored. Requires cross-pollination.

STANLEY PRUNE

A fine prune type plum, excellent quality, freestone, fruit large in size, dark blue skin, greenish yellow flesh, juicy and fine grained. Heavy bearer. Ripens mid-season. A New York State Experiment Station introduction.

DEATRICK APRICOT

Fruit is large, round, with good golden color. Tree is vigorous and productive. One of the best apricots we have seen.

GRAPE VINES

	Each Vine	3 Vines	10 Vines	25 Vines	50 Vines	100 Vines
2 year, No. 1	\$.65	\$1.70	\$4.50	\$9.40	\$15.70	\$25.00

Grape-vines should be planted 6 to 8 feet apart, in rows 8 feet apart.

DELAWARE

This is considered to be one of the highest quality grapes in cultivation. Berries are bright red and firm. The vines are hardy and productive.

CONCORD

The leading market, vineyard and home-grown variety. Dark blue berries of fine quality.

WORDEN

Resembles Concord but is sweeter, larger in bunch and berry, and a week ten days earlier than that variety.

FREDONIA

A very promising black grape, ripening two weeks earlier than Worden. Clusters are medium and compact, berries are large and round, skin thick and tough, the flesh juicy and very good quality.

NIAGARA

The standard white grape. It ripens with Concord but the bunches and berries are larger; very sweet.

MOORE'S EARLY

Bunch medium; berry large, round; vine exceedingly hardy. Ripens three weeks ahead of the Concord, making it desirable for early market.

CACO

The new red grape has a most delicious flavor and is of the highest quality.

NUT TREES

CHINESE CHESTNUT - CHING CHOW STRAIN

(Blight Resistant)

The favorite nut of many years ago, wiped out by the devastating blight, again returns as a hardy stock, resistant to the earlier plague. These trees, of Chinese stock, are quick and prolific bearing, usually producing 3 sweet, full flavored nuts to each burr. Fully as delicious as the native American Chestnut but a little larger in size. Hardy everywhere that peach trees will grow. Trees are very ornamental with attractive, glossy, rich green leaves on low-sweeping branches.

	Each	10
4 - 5 foot trees	2.75	25.00
3 - 4 foot trees	2.00	15.00

Write for quantity prices.

ENGLISH WALNUT

English Walnut trees are valuable for their fruit. They also make excellent shade trees. Tree is hardy and productive.

	Each	10
3 - 4 foot trees	\$3.00	\$27.50

Amherst, Mass.
August 25, 1962

To whom it may concern:

All salable apple, pear, plum and sweet cherry varieties propagated and now growing at Adams County Nursery and Fruit Farms, Aspers, Pennsylvania have been examined by the Massachusetts Trueness-to-Name Inspection Service. To the best of our knowledge, these trees are true to name as they now stand in the nursery row.

MASSACHUSETTS TRUENESS-TO-NAME INSPECTION SERVICE

The salable one year old apple trees propagated on clonal understocks and now growing in the nursery of Adams County Nursery & Fruit Farms, Aspers, Pennsylvania have been examined for trueness-to-name of rootstock, interstock, if any and variety.

To the best of our knowledge all parts of these trees are true-to-name as they stand in the nursery row.

The above named nursery has agreed to attach to each lot of 10 or less of such trees sold a label stating the particular rootstock and interstock, if any, as well as variety of which the tree is composed.

Date	Director, Bureau of Plant Industry

In the words of an old English herbalist then,

"Forward in the name of God; graft, set, plant and nourish up trees in every corner of your ground; the labor is small, the cost is nothing, the commodity is great; yourselves shall have plenty, the poor shall have somewhat in time of want to relieve their necessity, and God shall reward your good merits and diligence."
